DEPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PILING DATE: 1998-07-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 19274
LENGTH: 401

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 16756, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILLE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1998-02-18
SEQ ID NO 16756
LENGTH: 344

Patent No. 5958784
GENERAL INFORMATION:
APPLICANT: Benner. Steven A.
TITLE OF INVENTION: Predicting Folded Structures of Proteins NUMBER OF SEQUENCES: 114
CORRESPONDENCE ADDRESS:
ADDRESSEE: Steven A. Benner
STREET: Hadlaubstrasse 151
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                6.3%; Score 121; DB 2; Length 345; 22.1%; Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                     US-10-081-644-2

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A Geneseq 19Jun03:*

synthetic

This invention describes a novel nucleic acid representing a

Bax gene. The Bax gene of the invention is useful for identifying Bax resistant yeast or fungi, identifying, or obtaining and identifying Bax-resistant yeast or fungi, identifying, or obtaining and identifying Candida spp. sequences that are differentially expressed in a pathway eventually leading to programmed cell death or identifying inhibitors or inhibitor sequences of Bax-induced cell death. The products of the cinchipitor sequences of Bax-induced cell death. The products of the cinchipitor activity and can be used in vaccines or for gene therapy. The isolated nucleic acids, polypeptides, pharmaceutical compositions, antibense molecules and antibodies are useful as medicaments or in preparing a medicament for treating, preventing and/or alleviating diseases associated with yeast or fungi or proliferative disorders, such as cancer, or for preventing apoptosis in certain diseases. The compounds or preparing a medicament for modifying the endogenic flora of humans and preparing a medicament for modifying the endogenic flora of humans and cother mammals. The vaccine is useful for immunising against yeast or fungal infections. Apoptosis-related diseases include autoimmune disease. Inschaemia, diseases related with viral infections or neurodegenerations. This sequence represents a polypeptide associated with the Bax gene

```
This invention describes a novel nucleic acid representing a synthetic Bax gene. The Bax gene of the invention is useful for identifying candida spp. Sequences that are differentially expressed in a pathway eventually leading to programmed cell death. The products of the invention have cycostatic, fungicide; immunosuppressive, virucide and vasotropic activity and can be used in vaccines or for gene therapy. The invention have cycostatic, fungicide; immunosuppressive, virucide and vasotropic activity and can be used in vaccines or for gene therapy. The invention have cycostatic, fungicide; immunosuppressive, virucide and vasotropic activity and can be used in vaccines or for gene therapy. The invention have cycostatic, fungicide; immunosuppressive, virucide and properties and antibodies are useful as medicaments or in preparing a medicament for treating, preventing and/or alleviating and cancer, or for preventing apported in certain diseases. The compounds or preparing a medicament for modified organism are useful for preventing and content mammals. The vaccine is useful for immunising against yeast or funging infections. Apported is useful for immunising against yeast or funging infections. Appropriate infections. Appropriate infections and diseases include autoimmune disease, funding and infections. Appropriate infections and propriate infections and propriate infections and propriate infections. Appropriate infections and propriate infections. Appropriate infections and propriate infections and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           :| : : : | | : : | | : : : | 343

Human, open reading frame, ORFX, gene therapy, cancer; cirrhosis, hyperproliferative disorder; psoriasis; benign tumour; haemorrhage;

```
The present invention describes substantially purified human proteins (referred to as open reading frame, ORFX where X is 1-11491 [see Table 1 cm the specification). ABN15762 to ABN12752 encode the human ORFX proteins given in ABP0010 to ABP1500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated disorder in humans, and in the manufacture of a medicament for treating a squances can be used in gene therapy. ORFX sequences can be used in gene therapy. ORFX sequences can be used in the squances can be used in gene therapy. ORFX sequences can be used in the creatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders, nameorthage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, disbetes mellitus, systemic lupus erythematosus, hypertenaion, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious disease, autoimmune disorders such as multiple sclerosis, rheumatoid disease and autoimmune inflammatory eye disease. ORFX proteins are also cuseful for treating burns, incisions, ulcers, for treating osteoporosis, conception on injury in various tissues and conditions resulting from the parents of the parent of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the printed of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the parents of the paren
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        74 PNA-STDLKVGDTGFGFVHGASQTDPKNGAFABYARVYPPLFYK--SNLTHSTADEISEG 130

The present protein is encoded by one such promoter. The coding sequence for the present protein is useful for modulating the transcription of DNA sequences of interest. The sequences may also be used to tag or identify an organism or its reproductive material.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel promoter sequences useful for modulating transcription of plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The proteins shown in AAY96744-60 are encoded by 17 genes from a cluster in Aay967141 (ATCC 20542), which flank the NPKS cluster in Appergillus terreus (ATCC 20542), which flank the NPKS (nonaketide pollyketide synthase) gene is contained within the context of lovastatin production. The NPKS gene is contained within the context of the entire gene cluster but is not indicated here (see US5744350). The genes and proteins are named "ORF" or "Lov", where "Lov" signifies genes shown to be essential for lovastatin production. The portion of the gene cluster between ORF1 and the mid-region of LovF is referred to as the "DAB segment." Increasing lovastatin or monacolin J, production in a lovastatin-producing organism, comprises transforming the organism with a DAB segment, and expressing it (claimed). Lovastatin will also be transformation with the DAB segment and the entire LovF gene. The methods are used to increase biosynthetic production of lovastatin (with mat least 5-fold increase) which is an anti-hypercholesterolaemic agent, and also has some anti-fungal activity. Lovastatin inhibits the conversion of hydroxymmethylgluarylcoenzyme A (HMG-COA) into mevalonate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HMG-COA reductase. The methods can also be used to increase production monacolin J (claimed), which has anti-fungal activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CDIAGTVVKLGPNASTDLKVGDTGFGFVHGASQTDPKNGAFAEY----ARVYPPLFYKSN 118
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           62

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated promoter sequences from Pinus radiata and Bucalyptus grandis, comprising a sequence chosen from leaf-, root-, flower-, pollen-, bud-, meristem-specific promoters or temporally regulated promoters such as xylogenesis-specific promoters. The promoter polypeptides and their related polymucleotides are useful in the promoter constructs, used for modifying gene expression in a target organism, in particular a plant. The method is useful for modifying expression of a polymucleotide that comprises an introm sequence, through removal of the intron sequence. The method is useful for modifying growth and development of plants, and cellular responses to sequence, through removal of the intron sequence. The method is useful for modifying growth and development of plants, and cellular responses to tweetenal stimulus, such as environmental factors and disease pathogens. The sequences are useful in genome and physical mapping, in positional cloning of genes, in various assays to determine biological activity, to raise antibodies, to isolate corresponding interacting proteins and other compounds. Sequences ABU80745-AAU80764 represent Pinus radiata or other compounds. Sequences ABU80745-AAU80764 represent Pinus radiata

CC Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense mucleic acids can also be used to obtain antibodies capable of binding to the express these proteins. CC The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen Cf or homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an CG a wide variety of organisms. The present sequence represents an CG the printed specification, but was obtained in electronic of the printed specification, but was obtained in electronic C format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from WIPO at CG format directly from format directly from MIPO at CG format directly from MIPO at C

monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and EC for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication of sequence and proteins encoded by it are useful in pharmaceutical and esquence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. Comorcytogenes and related organisms.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO CC at fip.wipo.int/pub/published_pct_sequences.
